\section*{GEOGRAPHICAL INDEX BY IO ZONES OF LATITUDE II99}

Zone \(50^{\circ}\) S. to \(60^{\prime} \mathrm{s}\)

Station
Lat.
Lome.
Elements \(\overbrace{\text { Notes }}^{\text {Paqes }} \overbrace{\text { Data }}^{\text {Pres }}\)

\(7\)

```

[^0]:    ${ }^{1}$ For period Febl. to Nov., inclusive, and year insert " 1 " in front of figures.
    ${ }^{2}$ Raintall for $1920, p, 180$, should be:
    Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Hec. Year

[^1]:    1 " (Hours not given) " should be " $\frac{1}{2}$ (daily max. t daily min.)."
    ${ }^{2}$ The figures given on pp. 289 and 290 seem to be those for l'atna, Bihar. The location of this station is Lat. $25^{\circ} 40^{\prime}$ N., Long. $85^{\circ} 15^{\prime} \mathrm{E}$. This is the position of latna as given on the daily weather charts issued by the Indian Meteorological Department and the figures for Patna, Bihar, given in the India Monthly Weather Review are the same as those published in the World Weather Records.

[^2]:    1 Kioto pressure is stated to be at sea level but shomld he given as pressure at station
    ${ }^{2}$ Nemuro Temperature for the year 1918 should be:
    $\begin{array}{rcccccccccc}\text { Jan. } & \text { Feb. Mar. } & \text { Apr. May } & \text { June } & \text { duly } & \text { Iug. } & \text { Sopt. } & \text { Oct. } & \text { Nov. } & 1 \text { eee. } \\ -3.4 & 3.8 & 0.9 & 3.0 & 1.9 & 10.7 & 14.1 & 17.8 & 17.0 & 11.3 & 4.0 \\ -3.6\end{array}$
    The metans for the period should be:
    Jan. Feb. Mar. Apr. May June July Jug. Sept. Oet. Nov. Vec.

[^3]:    ${ }^{1}$ For West Australia, write Vorthern Australia.

[^4]:    ${ }^{1}$ Heans ot lxsi to 192:3

    * Aemis of 1841 10 19?\%.

[^5]:    ${ }^{1}$ The values of pressure for the yeurs 1948 to 1910 at Valencia and the means 1866 to 1920 should be as follows:

    Jan. Feb. Mar. Apr. May June July Aug. Sept. Uct. Nov. Dec. Year

    | 1948 | 1.090 | 1.234 | .872 | 1.021 | .922 | 1.115 | 1.041 | 1.043 | .889 | .944 | .990 | .783 | .995 |
    | :--- | :--- | :--- | :--- | ---: | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
    | 1909 | 1.147 | 1.137 | .541 | .853 | 1.031 | 1.075 | 1.016 | 1.064 | 1.097 | .685 | 1.095 | .650 | .949 |

    | 1910 | .845 | .541 | 1.094 | .893 | .986 | .905 | .921 | .831 | 1.282 | 1.000 | .685 | .597 | .882 |
    | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

    $\begin{array}{llllllllllllll}\text { M'ns } & .919 & .910 & .902 & .923 & .975 & 1.017 & .995 & .953 & .976 & .890 & .913 & .845 & .935\end{array}$
    ${ }^{2}$ The means of pressure given for Copenhagen are 0.7 to 0.8 mm . higher than the direct means 1842-1920.
    ${ }^{3}$ The pressure values given for Marseille are at Mean hea Level, not at station level as stated.
    "Pressure heading is "See uotes." No notes are given.

[^6]:    ${ }^{1}$ lnstead of 11 t . 147 m ., it should be $11 \quad 11 \mathrm{~s} \mathrm{~m}$. in the heading un pares $50 \%, 508$, 509, and 510. Wh pages 527 and 52 8 , 11 should be 146 m . instead of " ?."

[^7]:    ${ }^{1}$ The pressure at Rome is at Mean sea Level, not at station level as stated, and is probably the mean of $\frac{1}{3}\left(9+15+21^{\mathrm{h}}\right)$.
    2 The pressure valnes given for litrecht from 1849 to 1855 should have a correction of +0.7 applied to them. Ser values in appendix, p. 27.

[^8]:    ${ }^{1}$ Corrected values for the prion Int9 1920 at. I tredh are given in appulix. p. $\quad .7$.
    ${ }^{2}$ For corrected values of pressure at Bodij see appendix.
    ${ }^{3}$ For corrected values of temperature at dijetivaer, 1578 to 1890 , see appendix.
    *For corrected values of pressure at Oslo (Kristiania), 1866 to 1875 , see appendix.

[^9]:    ${ }^{1}$ Pressure is reduced $100^{\circ} \mathrm{C}$, and lat. of $45^{\circ}$ and the data are 1 an means of $\frac{1}{3}\left(7+1: 3+21^{4}\right)$.
    2 The mean of the year differs from the mean of the lwely monthly means, which is Eiss.a.
    \$The rainfall for kasall for 1978 should be:
    Jan. Feb. Mar. Apr. May June July Ang. Sept. Oct. Nuv. Mec. Year -The man pressures at Nowororsijeh shoulh in:
    Jan. Feb Mar. Ipr. May June duly Ang. Sept. Oct. Nov. Dee. Year

    ## PREFACE

    This collection of data is published in response to the need expressed by the following resolution passed by the lnternational Meteorological Conference in session at Utrecht in September 1923:

    ## RESOLUTION

    I3. (4) V. Considering Professor Exner's proposal about the calculation of the correlations between weather-anomalies in regions far from each other, the Conference thinks that publication of long and homogeneous series of observations in the form of monthly means of pressure, temperature, and rainfall would be of the highest importance for the study of the general circulation of the atmosphere. This publication should comprise a small number of stations at a mutual distance of 500 to 1000 kilometers, preferably belonging to the Réseau Mondial, and if these should fail, other stations with a longer homogencous series. It proposes that the various meteorological institutes should establish such series up to the year 1920 and invites the following gentlemen to see to the execution of this Resolution.

    Dr. Walker for the stations of Asia;
    Prof. Exner for the stations of Europe ;
    Mr. Clayton for the stations of America;
    Dr. Simpson for the stations of Africa, Australia and the oceans.
    Meteorology stands deeply indelted to Mr. John A. Roebling for providing the means to publish this long-desired collection of fundamental data, which cannot but be of great use in future theoretical and practical researches.

    ## EDITORIAL NOTE

    The data have been arranged for publication alphabetically, first under the grand divisions of the earth as Africa, Asia, Europe, etc., then by countries under each division and finally by stations in each country ; except in the case of Australia, Africa and the Indian Ocean, where it was found more practical to arrange the stations alphabetically under the larger divisions.

    The grand divisions and the countries are given under their English names, but the names of the stations have been taken as nearly as possible to accord with the spelling used in the countries where they are located, and the English equivalent is given in parentheses.

    The units used are those of the countries where the observations were made, and are given as they were received.

    Owing to the diversity of units used, and to the fact that explanation of the methods and the hours of observation were best arranged by countries, it was not considered feasible to publish the data by $10^{\circ}$ squares of latitude and longitude, as is done in the Réseau Mondial. An index of the stations according to the Réseau Mondial system is provided at the end of the publication.

    The material published has been collected, in so far as possible, from official sources responsible for the observations. In addition a large part of the data has been checked against neighboring stations by the various collectors, in order to eliminate errors which easily creep in when copying so large a mass of material. Many such errors were found and corrected by correspondence. In addition, small breaks in the continuity of the records were disclosed, and some of these were corrected by correspondence with the bureaus and offices responsible for the records. The causes of others could not be found, and they were left without change.

    The records coming from so many different sources were arranged under many different headings. They have been rearranged according to a uniform system.

    For reasons of economy, the notes and explanations are placed together in the first part of the publication, and the tables of data follow. The notes and the tables are arranged in the same alphabetical order, so that it will be casy to turn from one to the other. For some of the stations the notes and explanations are very full, for
    others there is an absence of explanation. This difference could not be corrected without unduly delaying the publication of the data.

    In general an effort was made by the compilers of the data to reduce the monthly and amual means to a uniform comparable series, in so far as the hours of observation and the height of the barometer were concerned.

    The totals of precipitation are understood to include all forms of condensed moisture ; as rain, snow, sleet, hail, dew, frost, etc. The snow, sleet, hail, frost are given in their equivalents of water by melting, weighing or estimating. In the tropics, the precipitation is chiefly rainfall, in temperate latitudes it is rain and snow, and in the polar regions chiefly snow.

    For many of the stations averages of the series, or normals, were given by the compilers. For others they were computed by the writer.

    Because relations between meteorological conditions and solar changes are frequently a subject of research, an appendix is added to the volume giving the relative sum-spot mumbers of Wolf and Wolfer as revised by Dr. A. Wolfer of Zürich. Huntington, ${ }^{1}$ Clayton, ${ }^{2}$ and Bauer ${ }^{3}$ have all independently found an anmal period in these numbers, the results of which are given below in percentages of the mean value:

    |  | Jan. | Feb. | Mar. | Apr. | May | Iture | July | Aug. | Sept. | O.t. | Nov. | Dec. |
    | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
    | Hunt. | 98.8 | 99.5 | 99.7 | 100.0 | 101.5 | 101.4 | 100.1 | 99.8 | 100.4 | 101.0 | 101.0 | 9.7 |
    | Clay. | 93.6 | 92.5 | 103.4 | 103.6 | 100.2 | 99.1 | 100.4 | 103.0 | 103.2 | 102.0 | 99.1 | 98. |
    | Bauer | 87.8 | 97.1 | 112.0 | 89.8 | 103.2 | 116.1 | 114.5 | 110.2 | 97.8 | 90.7 | 90.5 | 91.8 |
    | Mean departures from Annual Mean-Bauer and Clidtun. |  |  |  |  |  |  |  |  |  |  |  |  |
    | Obs. | $\begin{aligned} & \text { Jan. } \\ & -9.3 \end{aligned}$ | $\begin{aligned} & \text { Feb. } \\ & -5.2 \end{aligned}$ | $\begin{aligned} & \text { Mar. } \\ & +7.7 \end{aligned}$ | $\begin{gathered} \mathrm{A} p \mathrm{r} . \\ -3.3 \end{gathered}$ | $\begin{gathered} \text { May } \\ +1.7 \end{gathered}$ | $\begin{aligned} & \text { Juие } \\ & +7.6 \end{aligned}$ | $\begin{aligned} & \text { July } \\ & +7.5 \end{aligned}$ | $\begin{aligned} & \text { Aug. } \\ & +6.6 \end{aligned}$ | $\begin{aligned} & \text { Sept. } \\ & +0.5 \end{aligned}$ | $\begin{array}{r} 0 \times t \\ -3.6 \end{array}$ | Nov: 5.2 | Dec. |
    | Comp. | -6.4 | $-4.7$ | $-1.8$ | $+1.8$ | $+4.7$ | $+6.4$ | $+6.4$ | $+4.7$ | $+1.5$ | -1.8 | $-4.7$ | -6. |

    The mean departures of the results of Baner and Clayton from the annual mean are given above. When these are subjected to harmonic analysis they show an amplitude of 6.6 per cent with epoch about April I. The computed values for each month are given below

    the observed values. They show a range of 13 per cent from a minimum about January $I$ to a maximum about July I .

    A comparison of Wolfer's observations with those made by me at Canton, Massachusetts, shows that the annual variation is considerably less at Canton so that the period is no doubt of terrestrial origin and probably arises from the lower visibility in Europe during winter on account of the increased cloudiness combined with the low altitudes of the sun.

    It seems probable then that Wolfer's numbers shonld be multiplied by these percentages with opposite signs to those given and added to the observed numbers, at least since the year 1856 .
    H. H. Clayton.

    ## NOTES AND EXPLANATIONS

    Throughout the notes and tables, the following abbreviations have been used:
    $\mathrm{ft} .=\mathrm{foot}$, feet.
    ${ }^{n}=$ hour of observation, as $8^{n}, 14^{n}$.
    $\mathrm{H}=$ height of ground above Mean Sea Level.
    $\mathrm{H}_{\mathrm{b}}=$ height of barometer above sea level.
    $h_{r}=$ height of rain gage alove ground.
    $h_{1}=$ height of thermometer above ground.
    in. = inch, inches.
    Lat. = latitude.
    Long. $=$ longitule.
    ${ }^{m}=$ minute.
    $\mathrm{m} .=$ metcr.
    $\mathrm{mm} .=$ millimeter.

    ## AFRICA <br> ABBASSIA. EGYIT

    Authority.
    Physical Department, Ministry of Public Works, Cairo, Egypt. Pressure.

    Site: The height of the barometer alove Mean Sea I.evel was:
    1869 to 1903 ........................................ . . 33 m.
    1904 to 1922 ........................................ 29.9 m.
    All values have been reduced to a height of 33 m .
    Instruments: The following barometers were in use:
    1869 to 1899 . Fastré Fortin i. Index error correction applied ......................... + o.r mm.
    inoo January to April. Fuess Syphon 430. Index error correction applied......... 0.0 mm.
    1900 May to September. Fastré Fortin 2. Index error correction applied..........+I.o mm.
    1900 October to 1903. Fuess Syphon 46 r. Index error correction applied.......... +0.3 mm .
    $190+$ to 1905 Felruary. All readings rejected.
    1905 March to 1912 May. Tlicks Fortin 1,325 . Index error correction applied....... +0.1 (t) mm .
    igI 2 June and July. Fuess I'ortalle $16 \nleftarrow 6$. Index error correction applied...............- -0.25 mm .

    1912 July to 1921. Fuess Portable ij23. Index
    error correction applied. . . . . . . . . . . +0.62 mm .
    i922 January to December. Fuess Portable i648.
    Index error correction applied....... +0.15 mm .
    Hours: The hours of observation are as follows:
    1869 to 1899 . From readings cvery three hours.
    IgOo to I903. From hourly readings of a barograph.
    1905 to 1922. The means of observations at $8^{\mathrm{h}}, 14^{\mathrm{h}}$, and $20^{\mathrm{h}}$, corrected to reduce them to true means of 24 hours by a correction of +0.04 mm .
    Notes: All values have been corrected to normal gravity (Lat. $45^{\circ}$ ).
    The values for 1900 are stated to be unreliable.
    Temperature.
    Exposure: The thermometers had at least two different exposures prior to IgOO, when a screen of the present Egyptian pattern was installed, being first placed on a north verandah and later in a Renou pattern screen inside a louvred shed. The thermometers were moved from the verandah to the garden in I890, and it seems probable that another change of exposure took place about the begimning of 1897, and that the mean temperatures for 1897 , 1898 , and I899 are too low. Even since Ig00 the exposure cannot be considered to have been quite uniform, as latterly the screen became rather sheltered by trees.

    ## Hours:

    i869 to 1899 . From readings every three hours.
    I900 to 1903. From hourly readings.
    ig04 to 1922. The values are from the dry bull observations at $8^{\mathrm{h}}, 14^{\mathrm{h}}$, and $20^{\mathrm{h}}$, and the minimum thermometer readings, calculated according to the following formula:

    $$
    \frac{1}{4}\left(8^{h}+14^{h}+20^{h}+\text { Min. }\right)
    $$

    and reduced to the true means of $2+$ hours ley applying the following corrections:

    |  | Jan. | For. | Mar. | Apr. | May | June | July | Aug. | Sept. | Oct. | Nov. |
    | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
    | ${ }^{\circ} \mathrm{C}$. | +1.1 | +1.0 | +1.0 | +1.0 | +0.8 | +0.8 | +0.5 | +0.6 | +0.5 | +0.8 | +0.9 |
    | +0.9 |  |  |  |  |  |  |  |  |  |  |  |

    Precipitation.
    The height of the rim of the rain gage above the ground was 1.0 m .

    ## ACCRA, GOLD COAST

    $$
    \text { Lat. } 5^{\circ} 12^{\prime} \mathrm{N} \text {. Long. } 0^{\circ} 12^{\prime} \mathrm{W} \text {. }
    $$

    Temperature.
    Authoritics: i888 January to I892 December. Metcorological observations taken at Accra, i891-92, computed and published by the Medical Officer.
    1893 October to 1920 December. Manuscript returns communicated by the Director of the Medical and Sanitary Service and filed in the Meteorological Office, London. From 1893 October to 1912 June the returns give daily observations; from 1912 July to 1920 December, monthly summaries only are available.
    Sitc: There is no information as to the site. The height above Mean Sea Level was 82 ft . in 192 I .
    Obscrations: The standard adopted is the mean of the mean daily maximm and mean daily minimum. These figures were frequently unreliable or wanting and the values in italics have been computed from the observations of the dry bulb at $9^{\text {h }}$ and $\frac{1}{7}^{\text {h }}$ by means of the following correction, obtained from a number of the most reliable records.

    ```
    Jan. Feb. Mar. Apr. May Jume July Aur. Sept. Oct. Nov. Dec.
    b (9
    ```

    Precipitation.
    Authorities: As for Temperature, but some reference has been made to the Gold Coast Blue Piook.
    Notes: * The value for Octoler agon given on the MS. return is 0.00 in., but the printed value given in the Gold Const Blue Book is 0.32 in .

    * The value for February igro given on the MS. return is o.oo in., but the printed value given in the Gold Coast Blue Book is 3 .ro in. There was no rain during Felornary igro at the neighboring station of Ahuri, but owing to the local character of the winter rain in the (iokd Coast this comparison is not conclusive.
    1888-1892. The olservations were taken at $17^{\mathrm{h}}$.
    1893-1920. The observations were taken at $9^{1 /}$.

    ## ALEXANDRIA (KÔM EL NADÛRA) EGYPT

    ## Authority.

    Physical Department, Ministry of I'ublic Works, Cairo, Egypt. Pressure.

    Site: The height of the barometer above Mean Sea Level was 32 m . throughout the period.
    Instrumonts: The following barometers were in use: 1888 to 1900 April. The barometer and index error correction in use during these years are unknown. igoo May to 1909 May. Fuess Portable I439. index error correction applied.......-0. 0.20 mm . igog June to 1915 July. Finess Portable 1439. index error correction applied.......-O.I3 $11 m$. igr5 Angust to 1918 April. Fuess Portable 1439 , index error correction applied. . +0.06 mm . 1ضIS May to 1922. Firess Portable 1439, index error correction applied. . . . . . . . . . . . - 0.10 111m.
    Hours: The hours of observation are as follows:
    1888 to 1900 . From readings every three hours.
    1901 to 1922. The means of observations at $8^{\mathrm{h}}, 14^{\mathrm{h}}$, and $20^{\mathrm{h}}$, corrected to reduce them to true means.
    Notes: All values have been corrected to normal gravity (Lat. $45^{\circ}$ ) by applying a correction of -0.97 mm .
    Temperature.
    Hours: 1870 to 1888 . From observations made by lirona at $9^{\mathrm{h}}$ and $2 \mathrm{I}^{\mathrm{h}}$.
    The means represented by the formula $\frac{1}{4}\left(9^{h}+21^{h}+\right.$ Max. + Min.) are corrected to reduce them to Kom el Nadûra true means, by corrections derived from comparison of the observations made at the two stations during the eight years 1889 to 1896 .
    1889 to 1896 . The values given are the means between Pirona's corrected results (see 1870 to 1888 ) and those of Kôm el Nadûra.
    The two series are in good agreement, the average difference between monthly means without regard to sign being only $0.12^{\circ} \mathrm{C}$.
    1897 to 1900 . The values given are means of observations taken every three hours at Kôm el Nadîra.
    IgO1 to 1922. The values given are the means of the dry bulb observations at $8^{\mathrm{h}}, 14^{\mathrm{h}}$, and $20^{\mathrm{h}}$, and the
    minimum thermometer readings, calculated according to the following formula:

    $$
    \frac{1}{4}\left(8^{h}+14^{h}+20^{11}+\text { Min. }\right)
    $$

    and reduced to truc means by a correction derived from five years' thermograph charts.
    Notes: There does not seem any reason to fear any serious discontinuity except possibly at about igoi, when a screen of the Egyptian pattern was installed. No record of the form of screen employed at Kôm el Nadùra before that date can be traced, nor is the date when the screen was changed known for certain. It was, however, between 1901 and 1905.
    Precipitation.
    The height of the rim of the rain gage above the ground is 2.0 m . The observations of Kôm el Nadura only have been included.

    > ALIVAL (NORTH), SOUTH AFRICA

    Autumrity.
    Meteorological Office, Department of Irrigation, Pretoria, Union of South Africa.
    Pressure.
    Site: The height of the barometer cistern above Mean Sea Level was 4352 ft . throughout the period (I892 to I9IS).
    Hours: The hour of observation was $6 \underline{2}^{\frac{1}{h}}$ Greenwich Mean Time throughout the period.
    Notes: All values have been corrected to normal gravity (Lat. $45^{\circ}$ ) by applying a correction of -.039 in .
    Temperature.
    Site: As for Pressure.
    Mean: The standard adopted is the mean between the mean daily maximum and the mean daily minimum.
    Precipitation.
    Sitc: As for Pressure.

    ## BATHURST, GAMBIA

    Lat. $13^{\circ} 24^{\prime} \mathrm{N}$. Long. $16^{\circ} 36^{\prime} \mathrm{VV}$.
    Precipitation.
    Authorities:
    1884-1903. MS. data supplied by the Governor, Bathurst and filed in the Meteorological Office, London.

    1904-1906. Annual Colonial Reports-Gambia, numbers 452, 491, 536.
    1907-1918. Gambia Government Gazettes.
    1919-1920. Gambia Colony Blue-Books.
    Site: The station was at a height of 6 ft . throughout the period.

    ## BOUZAREAH, ALGIERS

    Lat. $36^{\circ} 48^{\prime} \mathrm{N}$. Long. $3^{\circ} 2^{\prime} \mathrm{E}$.
    Pressure.
    Authorities:
    1894 to 1914. Paris, Burcau Central Météorologique de France, Annales.
    I915 to 1920. Manuscript data supplied by the Office National Météorologique, Paris and filed in the Meteorological Office, London.
    Sitc: The height of the barometer above Mean Sea Level was 344 m . througlout.
    Hours of Observation:
    1894 to $1909.7^{\text {h }}, 13^{\text {h }}, 19^{\text {h }}$.
    1910 to 1920. Hourly. The valnes for 1894 to 1909 are corrected to the mean of 24 hours by applying the following corrections:

    |  | Jan. | Feb. | Mar. | Apr. | May | June | July | Aug. | Sept. | Oct. | Nov. |
    | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
    | mm . | Dec. |  |  |  |  |  |  |  |  |  |  |
    | to.1 | +0.1 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | +0.1 |

    Notes: All valnes are corrected to normal gravity (Lat. $45^{\circ}$ ) by applying a correction of -0.5 mm .
    Temperature.
    Authorities: As for Pressure.
    Site: As for Pressure.
    Obscrvations: The standard adopted is tlie mean of 24 hours. The values 1910 to 1920 are the direct means of 24 hourly readings, but from i894 to 1909 the means of $\frac{1}{4}\left(7^{h}+13^{h}+19^{\mathrm{h}}+\frac{19+\text { Min. }}{2}\right)$ are corrected to the mean of 24 hours, by applying the following correction :

    |  | Jan. | Feb. | Mar. | Apr. May | Junc | July | Aug. | Sept. | Oct. | Nov. | Dec. |
    | :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

    Precipitation.
    Authoritics: As for l'ressure.
    Sitc: As for Pressure.

    ## BULAWAYO, RHODESIA

    Authority.
    The Hydrographic Engineer, Department of Agriculture, Salisbury, Rhodesia.
    Pressure.
    Site: 1897 to 1901 August. Observations taken ly the Rev. Father Nicot at St. George's School, at the same height as the present site ( 44.40 ft .).
    rgor September to December. Observations taken at the Railway Station at a height of $4+69 \mathrm{ft}$.
    1902 January to 1903 May. Observations at St. George's School.
    1903 June to 1923. Observations ly the Rev. Father Goetz at the Observatory at a height of $+40^{\circ} \mathrm{ft}$.
    For the notes on the height of the station, see Introduction to Salisbury, Rhodesia. It is probable that the height of Pulawayo, like that of Salisbury, needs a correction of between - 30 and -60 ft ., but this has not yet been determined.
    The values of rgor September to December have been reduced to a height of $44+0 \mathrm{ft}$. by applying a correction of +0.026 in .
    Instrument: A Kew pattern barometer, index error correction +0.014 in . has been in use throughout the period.
    Hours:
    1897 to $1903.9^{\text {h }}$ (30th Meridian time).
    rgo4 to 1923 . $8^{\text {h }}$ (30th Meridian time).
    The values for 1904 to 1923 have been corrected to $9^{\text {h }}$, by applying the following corrections:

    | Jan. Fel. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. | Naches | .000 | +.003 | +.004 | +.005 | +.007 | +.015 | +.018 | +.014 | +.007 | +.004 |
    | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |$+.003 .000$

    Notes: All values have been corrected to normal gravity (Lat. $45^{\circ}$ ) by applying a correction of -0.053 in .
    Prior to January 1904, the pressure data may be unreliable. A correction of -.too in., obtained by comparison with the Salishury readings, has been applied to 1897 November and December: 1898 January: 1899 May and June.

    - Temperature.

    Site: As for Pressure.
    Exposure: Prior to January 1904 the thermometers were exposed in a small-sized Stevenson screen. Since that
    date they have been exposed in a large-sized Stevenson screen together with autographic instruments.
    Hours: The standard adopted is the mean between the mean daily maximum and mean daily minimum.

    ## CAIABAR, SOUTHERN NIGERIA

    Lat. $4^{\circ} 5 S^{\prime} N$. Long. $S^{\circ}$ I $9^{\prime} \mathrm{E}$.
    Precipitation.
    Authorities:
    1895 April to 1896 March. Meteor. Zeitschrift, 20, 1903. p. 474.
    i898 February to igoi June. Manuscript returns communicated by the Medical Officer and filed in the Meteorological Office, London.
    igoi August to 1905 December. Data extracted by Mr. C. E. P. Brooks for " The Rainfall of Nigeria and the Gold Coast," London Q. J. R. Meteor. Soc., 42, ig16, p. S5. These data were in many cases supplied in manuscript by the Medical Officer.
    1906-1910. Nigeria Government Gazettes.
    191I-1913. Southern Nigeria Blue Books.
    1914-1920. Nigeria Plue Books.
    Site: The height of the site above Mean Sea Level is nnknown, but from some barometric observations it is estimated as 40 ft .

    ## CAPE SPARTEL, TANGIERS

    Lat. $35^{\circ} 47^{\prime} \mathrm{N}$. Long. $5^{\circ} 55^{\prime} \mathrm{M}$.Pressure.
    Authorities: 1893 to 1920. Manuscript returns supplied by Mr. Edwin C. Hathaway and filed in the Meteorological Office, London.
    Site: The height of the barometer above Mean Sea Level was:
    i894 to July 1914. . . . . . . . . . . . . . . . . . . . . . . . . . . 197 ft .
    1914 September to 1915 December. . . . . . . . . . . . . . 235 ft .
    1916 Jantuary to ig20. . . . . . . . . . . . . . . . . . . . . . . . 197 ft .
    All values have been reduced to Mean Sea Level by a height correction based on the dry-bulb temperature ; this correction is as follows:
    I894 to July igi4. . . . . . . . . . . . . . . . . . . .about . . + . 2 I 5 in.
    1914 September to 1915 December.......about. . +.252 in .
    

    In Angust 1914 the station was attacked by natives and the Signal Station was temporarily closed, bit the instruments were transferred to the neighboring lighthouse and observations were recommenced under Mr. Hathaway's supervision. The old site was re-established in January 19 IG.
    Instrument: Barometer no. 653 B. T. Adie, index error correction .ooo in., in use throughomt.

    ## Hours:

    1894 to 191 I Febrnary........................ $9^{\text {h. }} \cdot 2 I^{\text {h }}$.
    
    1916 Jantary to April......................... . . $9^{\text {h1 }}$, $15^{\text {1. }}$.
    I916 May to 1920 December. . . . . . . . . . . . . $9^{\text {h }}, 15^{\text {h }}, 21^{\text {hh }}$.
    All values are corrected to the mean of 24 hours by the addition of the corrections given in Table A, 1)ased on hourly observations taken at Lisbon (Lima, J. d'Almeida, O Clima de Portugal Continental, 1922).

    Notes: All values are corrected to normal gravity (Lat. $45^{\circ}$ ) by applying a correction of $-.02+$ or -.025 in . according to the barometer reading.

    ## Temperature.

    Authorities: As for Pressure.
    Site: As for Pressure.
    Observations: The standard adopted is the mean of the mean daily maximum, mean daily minimum, mean of the dry bulb readings at $9^{h}$ and at $2 \mathrm{I}^{\mathrm{h}}$. In some months the maximum or minimum readings were unreliable or wanting, and the values in italic have been computed by applying corrections (Table B) based on the long series of reliable records,

    * Indicates a value corrected from $\frac{1}{2}(9+21)$.
    $\dagger$ Indicates a value corrected from $\frac{1}{2}(9+15)$.

    ## Precipitation.

    Authorities: As for Pressure.
    Site: As for Pressure.
    Table A.-Corrections Apptied to the Pressure l'alues to Reduce to the Mcan of 2/ Hours (mb.).

    $\frac{1}{2}\left(9^{\mathrm{h}}+15^{\mathrm{h}}\right) \quad-1.5-1.6-1.8-2.1$

    ## CAPE TOWN, SOUTH AFRICA

    Authority.
    Meteorological Office, Department of Irrigation, Pretoria, Union of South Africa.
    Pressure.
    Site: The height of the barometer cistern above Mean Sea Level was 40 ft . throughout the period (1841 to 1924).
    Hours: All values have been corrected to the mean of 24 hours.
    Notes: All values have been corrected for Index Error and to normal gravity (Lat. $45^{\circ}$ ) and Mean Sea Level.
    Temperature.
    Site: As for Pressure.
    Hours: The standard adopted is the mean between the mean daily maximum and the mean daily minimum.
    Precipitation.
    Site: As for Pressure.

    > DAR-ES-SALAAM, EAST AFRICA
    > Lat. $6^{\circ} 29^{\prime}$ S. Long. $39^{\circ}$ I $8^{\prime} \mathrm{E}$.

    Pressure.
    Authorilies: 1895 October to 1902 December. Hamburg, Deutsch C̈bersee. Meteor. Beobachtungen, Heft II-I4. 1903 January to 191 1 December. Heidke, P., Meteor. Beobachtungen aus Dentsch-Ostafrika, Teil 3-8, repr. from Mitt. d. D. Schutzgebieten, vol. 21-26.
    Site: 1895 October to 1898 December. In a house on the large harbor. On December 3r, 1898 the barometer was moved to a new site 130 m . from the shore at the same level. The height was determined as 7.6 m . from the records of a self-registering Seibt-Fuess level in 1902. The height is 9.62 m . above Dar-es-Salaam zero, which lies 1.97 m . helow Dar-es-Salaam mean water.
    Chunge's of Instriment: From December i 895 to December igoo a Bonesch barograph was in use, and a Fuess larograph subsequently. The barograms are controlled by eye readings of a mercury barometer at $7^{\mathrm{h}}, 14^{\mathrm{h}}$,
    and $2 \mathrm{I}^{\mathrm{h}}$ (ITechehmann station harometer, correction +0.3 mun. until December 3I, igo9. Finess station barometer, correction +0.1 mm .)
    Hours: Mean of 24 hours thronghout.
    Temperature.
    Authorities: As for Pressure.
    Sitc: As for Pressure.
    Instrument: A Fuess thermograph controlled ly eye observations was in use throughout.
    Hours: Mean of 24 hours throughout.
    Precipitation.
    Authorilics: As for Pressure.
    Sitc: As for Pressure.

    ## 

    Pressure.
    Authoritics: 1884 to 1916. Dr. J. K. Sutton, Kenilworth Observatory, Kimberley.
    1917 to 1920. Manuscript data supplied by the Mcterological Office, Department of Irrigation, Pretoria, and filed in the Meteorological Office, London.
    Sitc: The height of the barometer above Mean Sea Level was:
    1884 to 1912 May. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . .
    
    All values have heen corrected to Mean Sea Level.
    Hours: The hour of observation is $8 \frac{1}{2}$, 3oth meridian time, throughout the period.
    Notes: Nil values have been corrected to nomal gravity (Lat $45^{\circ}$ ) loy applying a correction of -.0 .39 in.
    Tearerature.
    Authorities:
    1885 to Tgit. 1)r. J. R. Sutton.
    1917 to 1920. Neteorological Office, Department of Irrigation, Pretoria.
    Hours: The standard adopted is the mean between the mean daily maximum and the mean daily minimum.
    Site: As for Pressure. In order to make the observations at the two sites comparable, the following corrections have been applied to the values from 19!2 June to 1920:

    |  | Jan. | Fel | Var. | Apr. | May | 1ume | July | Aur. | sept. | ont. | $\begin{aligned} & \text { Anv. } \\ & +1.0 \end{aligned}$ |  |
    | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
    | F. | +0.6 | +0.5 | $+0.5$ | +0.5 | +0.7 | +1.0 | +1.1 | $+1.3$ | $+1.3$ | $1.1$ | $+1.0$ |  |

    Exposure: The thermometers at the Observatory were placed on a trestle, $3 \frac{1}{2} \mathrm{ft}$. above the ground, and protected by thin wooden screens from sun and earth radiation.

    ## Precipitation.

    Authoritics:
    1873 to 1912 May. Dr. J. R. Sutton.
    1912 June to 1920. Meteorological Office, Department of Irrigation, Pretoria.
    Sitc: From 1873 to 1883 , the observations were taken at the Botanic Gardens, and from 1884 to 1912 May at the Observatory, with an over-lapping period of seven months in 1884 of fair agreement, so that the two records may be regarded as a comparable series of 39 years at a height of 262 ft . From 1912 June to 1920 , the rain gage was at a height of 50 ft ., and 110 correction has been applied to these figures.
    Instrument: An 8 -inch gage was in use at the Observatory with the rim 3 ft .6 in . above the ground.

    ## ENTEBBE, UGANDA

    Lat. $o^{\circ} 5^{\prime} \mathrm{N}$. Long. $32^{\circ} 29^{\prime} \mathrm{E}$.
    Pressure.
    Authoritics:
    1904 May to 1908 December. Manuscript returns communicated by the Scientific and Forestry Department. and filed in the Meteorological Office, London.
    igog to Igzo Uganda Blue Books.
    Changes of Sitc:
    1904 May to 1913 June 25 . . . . . . . . . . . . . . . . . . . . 3863 ft.
    1913 June 26 to ig2o December . . . .. . . . . . . . . . . . 3842 ft .
    All values have been corrected to a height of $38_{4} 2 \mathrm{ft}$. by applying the following corrections:
    igo4 May to 19ı3 May........................ + .ozo in.
    1904 June ..................................... + . $o$ or 7 in.
    Instrument: Barometer No. 1977, Casella, was in use throughout the period. The index error correction is unknown, but prestmed to be applied.
    Barometer No. 2025 Negretti and Zambra was in use up to April 1904, but the observations from this instrument have been rejected as inaccurate.

    Hours: The mean adopted throughout the period is the direct mean of $7^{h_{1}}, 14^{\mathrm{h}}$ and $21^{\mathrm{h}}$.
    Notos: All values have heen correctel to normal gravity (I at. $45^{\circ}$ ) by applying a correction of -.073 in .
    Mean Temperature.
    Authoritics: As for Presstre, with the addition of 1901 August to 1903 April. Mamuscript returns commmicated iny the Scientific and Forestry Department, and filed in the Meteorological Office, London.
    Sile: Sce note under Pressure.
    Obscriations: The standard adopted is the mean represented by the formula ${ }_{-1}^{1}\left[7^{\mathrm{h}}+14^{\mathrm{h}}+\left(2 \times 21^{\mathrm{h}}\right)\right]$.
    l'recipitation.
    Authorities: $\Lambda \mathrm{s}$ for Temperature, with the aldition of :
    IS96 April to 1900 December. Ugamala I'rotectorate Meteurological returns, 1905 .
    igoi Jannary to 1901 July. Mannseript returns as before.
    Sitc: See note under Pressure.
    FREETOUN, SIERRX LEONE
    Lat. $8^{\circ} 29^{\prime} \mathrm{N} . \operatorname{Long} .13^{\circ} 9^{\prime} \mathrm{W}$.
    Pressure.

    ## Authorities:

    1877 March to 1886 . Manuscript returns communicated by the Royal Army Medical Corps and filed in the Meteorological Office, London.
    1887 to 1888 . London, Army Medical Department. Ammal abstract of meteorological oloservations taken at Netley and stations abroad. London, Army Medical Department Reports.
    1880 to 1890 . No information was available.
    1891 to 1895 July. See 1887 -188S.
    1895 August to 1920. Manuscript returns communicaterl by the Principal Medical Officer filed in the Meteorological Office, London.
    Pressures for the years 1874 October to 1877 February were rejected as mreliable.
    Sitc: The barometer was at a height of 224 ft . above Mean Sea Level throughout the period.
    Changes of Instrument:
    1877 March to 1886 December. Barmmeter No. 45 A. M. D. Index error correction +.00 in. applied.

    1887 to 1888 ; i891 to i895 July. Barometer in use is unknown, but it is assumed that the necessary corrections have been made.
    1895 August to igi i December. Barometer No. 3 A. M. D. Index error correction +.004 in. applied.
    1912 August to 1920 December. Barometer No. M. O. 1233 Kew Pattern. Index error correction -.003 or -. 004 in . (according to the reading) applied.
    Changes of Hours of Obscrvation:
    1877 March to 19 io Jume........................... $9^{h}$, $I^{\text {h }}$.
    igio July to 1920 December....................... $9^{\text {h }}$, $17^{\text {h }}$.
    All values have been corrected to the mean of 24 hours by corrections (Table A) based on observations at Duala and Sansane Mangu.
    Notcs: All values have been corrected to normal gravity (Lat. $45^{\circ}$ ) by applying a correction of -.073 in . or -.074 in . according to the barometer reading.

    * The value for ifhr. was thought to be doubtful and the pressure was corrected to the mean of 24 hours from the mean at $9^{h}$ (Table A).
    $\dagger$ The value for $9^{h}$ was thought to be doultful and the pressure was corrected to the mean of 24 hours from the mean at $15^{\text {h }}$ by applying a correction of +.046 in.
    The years i887 and i 888 are already reduced to Mean Sea Level in the Army Medical Department reports and the values have been reduced to station level by applying the corrections given in Table B.
    Temperature.
    Authoritics:
    1874 October to 1877 February. Manuscript returns communicated by the Royal Army Medical Corps and filed in the Meteorological Office, London.
    1877 March to 1920. As for Pressure.
    Sitc: As for Pressure.
    Obscrotions: The standard adopted is the mean of the mean daily maximum and mean daily minimum. These figures were unreliable or wanting in certain months and the values in italic have been computed by applying corrections (Table C) based on a number

    of the most reliable records. The symbols against these values indicate the methot of computation, as follows:

    * $\frac{1}{2}\left[\right.$ max. $+\left(9^{11}+\right.$ correction c) $)$.
    $\dagger \frac{1}{2}\left(9^{h}+15^{h}\right)+$ correction a.
     tion $\left.b^{\prime}\right)$ ].
    $\S 9^{h}+$ correction d.
    Precipitation.
    Authorities: As for Temperature with the addition of 1889-1890 from a sheet of rainfall values printed in Sierra Leone (sce below).
    Notes: * The manuscript returns for the year 1882 show all extraordinarily small total for the year of 33.13 in . A sheet printed in sierra l.cone in ro, 4 , giving the monthly totals for the periox 1882 to 1903. gives the ammal total as 107.17 in . and the figures given by this sheet have been adopted. For subsequent years this sheet is in good agreement with the manuscript except for occasional arithmetical errors. According to the Sierra Leome "Official Gazette" the annual rainfall in 1882 was 110.58 in., but the figmes from this source for the years i88i and 1883 are crroneous.

    Table A.-Corrections Applied for Reduction of l'ressure to Mean of 2: Hours. Inches.
